IEEE P802.3cg 10 Mb/s Single

IEEE P802.3cg 10 Mb/s Single Twisted-pair Ethernet and associated power delivery PAR and CSD responses

Title:

Standard for Ethernet Amendment: Physical Layer Specifications and Management Parameters for 10 Mb/s Operation over Single Balanced Twisted-pair Cabling and Associated Power Delivery

Scope of project:

Specify additions to and appropriate modifications of IEEE Std 802.3 to add 10 Mb/s Physical Layer (PHY) specifications and management parameters for operation on single balanced twisted-pair copper cabling. Define methodology for the optional provision of power to connected Data Terminal Equipment (DTE) for use with IEEE 802.3 10 Mb/s single-pair interfaces

Need:

Applications such as those used in automotive and automation industries have begun the transition of legacy networks to Ethernet. This has generated a need for a 10 Mb/s solution which will operate over single balanced twisted-pair cabling. IEEE 802.3 does not currently support 10 Mb/s over a single twisted-pair medium, and therefore a reduction in the number of wire pairs and magnetics required for 10 Mb/s twisted-pair Ethernet will provide a basis for an optimized solution in these applications
