Member enrichment activities

- Title: Spectrum Sensibilities: 2030 and Beyond
- Author: Rich Kennedy (Bluetooth SIG)
- Abstract: The global RF spectrum maps represent decades of adding licensees and unlicensed/licenseexempt spectrum based on available spaces, not optimization of the applications being supported. This had led to a very complicated, and in some cases unworkable situations for new technologies. The only real solution for the next 100 years is a full study of how best to remap spectrum based on today's understanding of spectrum needs, application optimization, and continued technology advances.
