| Revision       | C/LM/802.1 WG                             | Standard for Local and Metropolitan Area Networks<br>Timing and Synchronization for Time-Sensitive<br>Applications  | This standard specifies protocols, procedures, and managed objects used to ensure that the synchronization requirements are met for time-sensitive applications, such as audio, video, and time-sensitive control, across networks, for example, IEEE 802 and similar media. This includes the maintenance of synchronized time during normal operation and following addition, removal, or failure of network components and network reconfiguration. It specifies the use of IEEE 1588(TM) specifications where applicable in the context of IEEE Std 802.1Q(TM). Synchronization to an externally provided timing signal [e.g., a recognized timing standard such as Coordinated Universal Time (UTC) or International Atomic Time (TAI)] is not part of this standard but is not precluded.   | 05 Jun 2023  | 31 Dec 2027   | 2027 NA   | NA   | Draft Development  |
| New            | C/LM/802.1 WG                             | Standard for Local and Metropolitan Area Networks – Ci  | This standard specifies Cut-Through Forwarding (CTF) bridges based on the IEEE 802.1Q<br>bridge architecture, including protocols, procedures, and managed objects. CTF<br>bridges interconnect individual local area networks (LANs) using different or identical<br>media access control (MAC) methods with and without support for CTF. This standard<br>also details the usage of CTF bridges in bridged networks.  | 05 Jun 2023  | 31 Dec 2027   | NA  | NA   | Draft Development  |

| P802.11    | Revision     | C/LM/802.11 WG | Standard for Information Technology –<br>Telecommunications and Information Exchange<br>Between Systems Local and Metropolitan Area<br>Networks – Specific Requirements - Part 11: Wireless<br>Local Area Network (LAN) Medium Access Control<br>(MAC) and Physical Layer (PHY) Specifications  | The scope of this standard is to define one medium access control (MAC) and several<br>physical layer (PHY) specifications for wireless connectivity for fixed, portable, and<br>moving stations (STAs) within a local area.  | 10 Feb 2021 | 31 Dec 2025 | NA         | NA           | Draft Development |
| P802.11bh  | Amendment    | C/LM/802.11 WG | Standard for Information Technology–<br>Telecommunications and Information Exchange<br>Between Systems Local and Metropolitan Area<br>Networks–Specific Requirements - Part 11: Wireless<br>LAN Medium Access Control (MAC) and Physical Layer<br>(PHY) Specifications – Amendment: Operation with<br>Randomized and Changing MAC Addresses | This amendment specifies modifications to the medium access control (MAC)<br>mechanisms to preserve the existing services that might otherwise be restricted in<br>environments where STAs in an Extended Service Set (ESS) use randomized or changing<br>MAC addresses, without affecting user privacy. User privacy includes exposure of<br>trackable information to third parties or exposure of an individual's presence or<br>behavior.<br>This amendment introduces mechanisms to enable session continuity in the absence of<br>unique MAC address-to-STA mapping. For STAs in an ESS that use randomized or<br>changing MAC addresses, this amendment preserves the ability to provide customer<br>support, conduct network diagnostics and troubleshooting, and detect device arrival<br>in a trusted environment.   | 10 Feb 2021 | 31 Dec 2025 | NA         | NA           | Draft Development |
| P802.11bi  | Amendment    | C/LM/802.11 WG | Standard for Information Technology–<br>Telecommunications and Information Exchange<br>Between Systems Local and Metropolitan Area<br>Networks–Specific requirements - Part 11: Wireless<br>LAN Medium Access Control (MAC) and Physical Layer<br>(PHY) Specifications – Amendment: Enhanced Service<br>with Data Privacy Protection        | This amendment specifies modifications to the IEEE Std 802.11 medium access control (MAC) specification to specify new mechanisms that address and improve user privacy.  | 10 Feb 2021 | 31 Dec 2025 | NA         | NA           | Draft Development |
| P802.11bk  | Amendment    | C/LM/802.11 WG | Standard for Information Technology<br>Telecommunications and Information Exchange<br>between Systems - Local and Metropolitan Area<br>Networks-Specific Requirements - Part 11: Wireless<br>LAN Medium Access Control (MAC) and Physical Layer<br>(PHY) Specifications Amendment: 320MHz<br>Positioning                                    | This standard defines extensions to positioning mechanisms to support 320 MHz channel operation.  | 03 Dec 2022 | 31 Dec 2026 | NA         | NA           | Draft Development |
| P802.15.7a | Amendment    | C/LM/802.15 WG | Standard for Local and Metropolitan Area Networks -<br>Part 15.7: Short-Range Optical Wireless<br>Communications Amendment: Higher Speed, Longer<br>Range Optical Camera Communication (OCC)  | This amendment defines a high-rate Optical Camera Communications (OCC) Physical<br>Layer (PHY) using light wavelengths from 10 000 nm to 190 nm in optically transparent<br>media. It is capable of delivering data rates up to 100 Mb/s and is designed for point-to-<br>point and point-to-multipoint communication. Adaptation to varying channel<br>conditions and maintaining connectivity during high mobility (speeds up to 350 km/h),<br>flicker mitigation, RF co-existence, and a communication range of up to 200 m, are<br>included. MIMO (e.g. MIMO-OFDM) is utilized to deal with high-levels of optical<br>interference while maintaining high-rate data transmission. Relaying mechanisms are<br>included enabling heterogeneous operation with existing RF wireless data<br>communications standards. The Amendment adheres to applicable eye safety<br>regulations. | 24 Sep 2020 | 31 Dec 2024 | NA         | NA           | Draft Development |
| P802.16t   | Amendment    | C/LM/802.15 WG | Standard for Air Interface for Broadband Wireless<br>Access Systems – Amendment - Fixed and Mobile<br>Wireless Access in Narrowband Channels  | This project specifies operation in licensed spectrum with channel bandwidths greater<br>than or equal to 5 kHz and less than 100 kHz. The project specifies a new PHY, and<br>changes to the MAC as necessary to support the PHY. The amendment is frequency<br>independent but focuses on spectrum less than 2 GHz. The range and data rate<br>supported by the narrower channels are commensurate with those of the base<br>standard, as scaled by the reduced channel bandwidth. The project also amends IEEE<br>Std 802.16 as required to support aggregated operation in adjacent and non-adjacent<br>channels.   | 03 Dec 2020 | 31 Dec 2024 | NA         | NA           | Draft Development |

| P802.15.14           | New                 | C/LM/802.15 WG | Standard for Impulse Radio Ultra Wideband Wireless<br>Ad Hoc Networks   | This standard specifies the physical layer (PHY) and media access control sublayer (MAC)<br>for impulse radio ultra wideband (UWB) wireless ad hoc connectivity with fixed,<br>portable, and moving devices with limited energy consumption requirements, and<br>supports real time precision ranging capability that is accurate to within a few<br>centimeters. PHYs are defined for devices operating in a variety of regulatory domains.   | 23 Sep 2021 | 31 Dec 2025 | NA          | NA           | Draft Development |
| P802.15.15           | New                 | C/LM/802.15 WG | Standard for Wireless Ad Hoc Networks   | This standard specifies the physical layer (PHY) and medium access control (MAC)<br>sublayer for wireless ad hoc network connectivity with fixed, portable, and moving<br>devices with very low energy consumption requirements. PHYs are defined for devices<br>operating in a variety of regulatory domains.   | 23 Sep 2021 | 31 Dec 2025 | NA          | NA           | Draft Development |
| P802.15.3            | Revision            | C/LM/802.15 WG | Standard for Wireless Multi-Media Networks  | This standard defines PHY and MAC specifications for high data rate wireless<br>connectivity (typically over 200 Mb/s) with fixed, portable, and moving devices. Data<br>rates are high enough to satisfy a set of consumer multimedia industry needs, as well as<br>to support emerging wireless switched point-to-point and high rate close proximity<br>point-to-point applications.  | 08 Dec 2021 | 31 Dec 2025 | 12 Jan 2023 | 12 Mar 2023  | SA Ballot: Ballot |
| P802.15.4ab          | Amendment           | C/LM/802.15 WG | Standard for Low-Rate Wireless Network –<br>Amendment: Enhanced Ultra Wide-Band (UWB)<br>Physical Layers (PHYs) and Associated Medium Access<br>and Control (MAC) sublayer Enhancements | This amendment enhances the Ultra Wideband (UWB) physical layers (PHYs) medium access control (MAC), and associated ranging techniques while retaining backward compatibility with enhanced ranging capable devices (ERDEVs). Areas of enhancement include: additional coding, preamble and modulation schemes to additional coding, preamble and modulation schemes to additional coding, preamble and modulation schemes to support improved link budget and/or reduced air-time relative to IEEE Std 802.15.4 UWB; additional channels and operating frequencies; interference mitigation techniques to support greater device density and higher traffic use cases relative to the IEEE Std 802.15.4 UWB; improvements to accuracy, precision and reliability and interoperability for high-integrity ranging; schemes to reduce complexity and power consumption; definitions for tightly coupled hybrid operation with narrowband signaling to assist UWB; enhanced native discovery and connection setup mechanisms; sensing capabilites to support presence detection and environment mapping; and mechanisms supporting low-power low-latency streaming as well as high data-rate streaming allowing at least 50 Mb/s of throughput. Support for peer-to-peer, peer-to-multi-peer, and station-to-infrastructure protocols are in scope, as are infrastructure synchronization mechanisms. This amendment includes safeguards so that the high throughput data use cases do not cause significant disruption to low duty-cycle ranging use cases. | 23 Sep 2021 | 31 Dec 2025 | NA          | NA           | Draft Development |
| P802.15.4            | Revision            | C/LM/802.15 WG | Standard for Low-Rate Wireless Networks   | This standard defines the physical layer (PHY) and medium access control (MAC) sublayer specifications for low-data-rate wireless connectivity with fixed, portable, and moving devices with no battery or very limited battery consumption requirements. In addition, the standard provides modes that allow for precision ranging. PHYs are defined for devices operating in a variety of geographic regions.  | 21 Sep 2022 | 31 Dec 2026 | NA          | NA           | Draft Development |
