Title

Corrigendum 1: Multi-Gigabit Automotive MDI return loss

Type of Project

Corrigendum to IEEE Standard 802.3-2022

Scope of proposed changes

Corrections to MDI return loss equations 149–27 and 165–42 and to figure 165–38 'MDI return loss calculated limit in Equation (165–42).

Need

CSD updates

[1] Distinct Identity updated based on ITU-T SG15 liaison letter to IEEE 802.3 informing us that they had remove the “G.698.2 addition of 200G and 400G” work item from their programme

- While there are no other IEEE standards or projects with a similar scope, the IEEE 802.3 Working Group has received a liaisons from ~~two~~ one organizations indicating that ~~it~~ the respective groups ~~has~~ have completed a related efforts ~~underway~~. ITU-T Study Group 15 has communicated that it is working on a future revision of Recommendation ITU-T G.698.2 to include 400G application codes for multi-vendor interoperable 400 Gb/s single channel optical interfaces that operate over a DWDM system for approximately 80 km distances. The Optical Internetworking Forum (OIF) has communicated that it is developed the 400ZR Implementation Agreement (IA), which is targeted at (passive) single channel and (amplified) short-reach DWDM (dense wavelength division multiplexing) / DCI (data center interconnect) pluggable modules with distances supported from 80-120 km. The effort ~~will support~~ s 400 Gb/s Ethernet via the 400GAUI-8 interface that is defined by IEEE 802.3.

CSD updates (continued)

[2] Broad Market Potential updated to reflect approval of the IEEE Std 802.3ct-2021 100 Gb/s over DWDM systems. This means that IEEE P802.3cw will now provide an upgrade path from 100 over DWDM systems instead of 10 Gb/s.

- This project will provide upgrade paths for existing application areas that need greater bandwidth at the reaches specified. Applications over 80 km over DWDM systems migrating from 100 Gb/s do not have an upgrade path.
