Abstract: This contribution provides comments on K.147.**Discussion**

ITU-T Study Group 5 liaison letter SG5-LS112 noted that ITU-T SG5 Q2/5 had opened a new work item to revise ITU-T K.147 "Protection of digital ports connected to balanced pairs of conductors " and that ITU-T SG5 would welcome a contribution from the IEEE 802.3 Ethernet Working Group regarding this revision.

In response to this opportunity, the IEEE 802.3 Ethernet Working Group has comments on K.147 shown as marked-up text in the embedded document.

This contribution was agreed to at the IEEE 802.3 Ethernet Working Group interim meeting, held in Annapolis, MD, USA on 16 May 2024.

Proposal

The comments in the embedded document should be taken into consideration in development of K.147.
