Extensions on the TSN UNI traffic specification

Konstantinos Alexandris, Lihao Chen, Tongtong Wang
Huawei Technologies
Objective

• TSN UNI TSpec to handle TokenBucket traffic model [1,2]
  • Need for a standard way to receive stream requirements
  • Only basic and TimeAware Tspec elements are included in 802.1Q-2022

• Enable TSN UNI to support the TokenBucket traffic model in conjunction with centralized configuration [*]
  • End-station/CUC needs to send the TokenBucket Tspec via TSN UNI
  • Current projects and standards do not define specific YANG models
  • Centralized configuration involves CNC assistance support
  • To be complementary to RAP (P802.1Qdd) that uses distributed configuration

[*] Both fully centralized and centralized network/distributed user configuration models

Proposal (1/2)

- **Tspec** definition is not **complete**: Addition of parameters for the TokenBucket model

**Sub-clauses to be extended:**

- **46.2.3.5**: Extension of the existing Tspec incorporating the relevant parameters *(currently missing)*

<table>
<thead>
<tr>
<th>Name</th>
<th>Data type</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>MaximumFrameLength</td>
<td>uint16</td>
<td>46.2.3.5.8</td>
</tr>
<tr>
<td>MinimumFrameLength</td>
<td>uint16</td>
<td>46.2.3.5.9</td>
</tr>
<tr>
<td>CommittedInformationRate</td>
<td>uint64</td>
<td>46.2.3.5.10</td>
</tr>
<tr>
<td>CommittedBurstSize</td>
<td>uint32</td>
<td>46.2.3.5.11</td>
</tr>
</tbody>
</table>

The presence of Tspec TokenBucket is mutually exclusive to the TrafficSpecification elements (Table 46-8).
Proposal (2/2)

• Existing YANG models do not support centralized configuration including the TokenBucket Tspec

Sub-clauses to be extended:

• **48.5.13:** Extension of the respective YANG schema tree (*currently missing*)
  *
  • traffic-specification [3]: To include TokenBucket TLV parameters [TokenBucket Tspec]

• **48.6.3:** Extension of the YANG module related to the respective YANG schema tree (*currently missing*)
  *
  • container token-bucket: To be added under container traffic-specification including the relevant parameters as leaf statement:
    *
    max-frame-length, min-frame-length, committed-information-rate, committed-burst-size

The way TimeAware Tspec is conveyed from user to CNC has already been defined.

We should follow the same methodology with TokenBucket Tspec.
Conclusion

Need to develop the TSN UNI extension

1. A new PAR for this extension

2. Other alternatives?
Thank you.
