C/ 07         SC 7.1.3.1.3         P 69         L 6         # 152           ENGWER, DARWIN A         Individual	C/         O7         SC         7.1.3.3.3         P         L         # 113           STEPHENS, ADRIAN P         Individual
Comment Type         TR         Comment Status         D           After the 802.11e merge the text for the To DS and From DS clauses is more confusing than ever. The text in Table 2 is now also incorrect.         DuggestedRemedy	Comment Type <b>E</b> Comment Status <b>X</b> There's an example of "may only" here and 5 others in the document. The normative power of this phrase is ambiguous as it is intended to be a strict prohibition, but it is achieved using "may" language. What is intended is that rather than x may only y, x shall not (not y). The style guide doesn't help us here.
Replace the To DS and From DS bit designations and definitions with a two bit field, the meaning of which is defined by Table 2.	SuggestedRemedy
Delete all the existing text in clauses 7.1.3.1.3 and 7.1.3.1.4 except the sentence that reads "The permitted bit combinations and their meanings are given in Table 2."	In this case repplace with "A wildcard BSSID shall not be used in the BSSID field of a frame except for management frames of subtype probe request", with similar rewording for the other cases.
Correct the descriptions in Table 2 as follows:	Proposed Response Response Status <b>O</b>
To/From: 00: Data frame direct from one STA to another STA within the same IBSS, or a data frame direct from one non-AP QSTA to another non-AP QSTA within the same QBSS, as well as all management and control frames.	CI 07SC 7.1.3.4PL# 114STEPHENS, ADRIAN PIndividualComment TypeTComment StatusD
10: Data frame destined for the DS or being sent by a STA associated with an AP to the Port Access Entity in that AP.	"Sequence control field is not present in control frames." This statement, while true, is not necessary. The other fields don't have a description of which packet types they are present in.
01: Data frame exiting the DS or being sent by the Port Access Entity in an AP.	SuggestedRemedy Remove the quoted sentence here and the matching statement in 7.1.3.4.1.
11: Data frame using the four-address wireless distribution system (WDS) format. This standard does not define procedures for using this combination of field values.	Proposed Response Response Status W
oposed Response Response Status W	PROPOSED REJECT.
PROPOSED ACCEPT IN PRINCIPLE.	It is believed that the statements add clarity to the specification.
Delete clause 7.1.3.1.4 and all the text in 7.1.3.1.3. Retitle 7.1.3.1.3 as "ToDS and FromDS fields".	CI 07         SC 7.1.3.5.1         P         L         # 115           STEPHENS, ADRIAN P         Individual
As the only sentence in this subclause, insert "The meaning of the combinations of values for the ToDS and FromDS fields are shown in Table 2."	Comment Type E Comment Status X Footnote 18 is a statement of the obvious.
Insert the table as described in the suggested remedy.	SuggestedRemedy Remove it.
	Proposed Response Response Status <b>O</b>

Comment Type       TR       Comment Status       X         MLME-ASSOCIATE.response is missing the EDCAParameterSet parameter, which somehow(???) shows up in the corresponding .confirm. Is this information relayed from the AP, or just being echoed locally from the START.request primitive?         SuggestedRemedy add the missing parameter       Response Status       0	Comment Type TR Comment Status X The PHY characteristics parameter aPHY-RX-START-Delay is absent from the parameter list of the PLME-CHARACTERISTICS.confirm primitive. This is the ONLY ONE of the 20 PHY characteristics parameters that is not present, and there is no reason stated for its omission. Furthermore, in rejecting sponsor comment 280, which called for a definition of this parameter in clause 9, the reason for rejection was that aPHY-RX-START-Delay was defined for each of the individual PHYs. This is true, but then this parameter value is not included in the PLME primitive that provides such parameter values from PHY to MAC. A significant side-effect of this omission is that there is no description of the meaning of aPHY-RX-START-Delay in any clause that is not specific to a single PHY.
CI 10       SC 10.3.7.4       P 342       L 18       # 156         ENGWER, DARWIN A       Individual         Comment Type       TR       Comment Status X         MLME-REASSOCIATE.response is missing the EDCAParameterSet parameter, which company (222) above up in the company data confirm. In this information relayed from the company of the company of the company.	SuggestedRemedy Add an aPHY-RX-START-Delay parameter to PLME-CHARACTERISTICS.confirm primitive, and define said parameter in the table in clause 10.4.3.2. To keep the ordering the same as the PHY characteristics value tables in the various PHY clauses, the proper place to add this parameter is immediately below aCCATime. An appropriate definition for aPHY-RX-START-Delay is "The delay, in microseconds, from the start of the PHY
somehow(???) shows up in the corresponding .confirm. Is this information relayed from the AP, or just being echoed locally from the START.request primitive? SuggestedRemedy add the missing parameter	preamble on the WM to the issuance of the PHY-RX-START.indicate by the PHY."         Proposed Response       Response Status         O

#### Comment Type TR Comment Status X

Sponsor ballot comment 258 was rejected, with a statement that aRxPLCPDelay "is a nominal time, not a maximum or minimum time." However, this rejection was inappropriate because the comment concerned neither maxima nor minima but WHICH BIT is being described by this nominal reporting time. The issue is that some PHYs (e.g. OFDM) do not necessarily provide uniform delay for delivering all bits of an incoming frame from PMD to MAC. Proper operation of the MAC is dependent on the RxPLCPDelay which occurs when delivering the LAST bit of the incoming frame, as illustrated in Figure 166. To achieve interoperability, it is vital that the specified delay be suitable for calculating the time reference for the end-of-reception that the MAC uses for generating IFS periods and initiating responses within frame exchange sequences. Therefore, the issue is not maximum/minimum times rather than nominal time, but nominal time for THE LAST BIT rather than nominal time for "a bit" (which implicitly assumes that the nominal delivery delay for all bits of the received frame is equal -- which may not be the case, for example consider the case of a minimum-length, directed data frame at a data rate <12Mb/s). Failing to provide this clarification of WHICH BIT the aRxPLCPDelay refers to could lead to non-interoperable implementations of any PHY with a symbol time that exceeds the 1us time resolution of MAC intervals.

### SuggestedRemedy

In the description of aRXPLCPDelay, change "a bit" to "the last bit of a received frame"

### Comment Type TR Comment Status X

Sponsor ballot comment 231 was "accepted in principle" by deleting the final sentence of the sole paragraph in 11.1.2. Far from incorporating the principle of the comment, this resolution totally removes any bounds upon the degree of inter-station synchronization within a BSS. Interoperable operation of the MAC -- AT LEAST the operation of a QBSS -- requires a bound on the magnitude of non-synchronism between the contending stations under EDCA, and/or the pollable QSTAs under HCCA. In the absence of any constraint on TSF synchronization tolerance, there are numerous features of the MAC that are subject to non-interoperable behavior, including, but not limited to, quiet periods, listen intervals, and setting of the NAV by non-AP stations at TBTT.

#### SuggestedRemedy

Retaining the specification from D5.0 of "4 symbols plus the maximum propagation delay of the PHY" is superior to deleting this sentence without replacement. The preferred way to update/correct the "4us" constraint that appeared in 802.11-1999 (R2003) is "2 symbol periods of the PHY plus 2 microseconds plus aAirPropagationTime."

Comment Type TR Comment Status X

(Submitted on behalf of Marc Jalfon) This comment relates to comment 65 by Andrew Myles in document IEEE 802.11-06/0095r4 that was rejected by the comment resolution committee. This commenter agrees with Mr Myles comments, and disagrees with their dismissal by the comment resolution committee. The DFS channel changing facilities for IBSS represent a very complex set protocols that have little value in the vast majority of cases and will not work in many circumstances. Moreover, given that european regulatory agencies have relaxed their dfs requirements for IBSS, DFS in IBSS is not needed anymore to fulfill the PAR.

#### SuggestedRemedy

Delete all text related to selecting a new channel in an IBSS (i.e. the referenced subclause and any references to it). The precise set of changes have been documented in the response to comment 65 in the referenced document.

#### Comment Type TR Comment Status X

Sponsor ballot comment 250 was rejected because it attempted to introduce normative wording into the definition of an abstract interface. However, the (abstract) behavior that was the subject of the rejected comment is still relevant, because proper operation of the MAC IS dependent on the PHY maintaining physical WM busy (CCA busy) for the duration indicated in a valid PLCP header. The solution is to describe the expected behavior without introducing normative wording.

#### SuggestedRemedy

Add a statement at the end of the existing text that states: "After generating a PHYRXSTART.indication the PHY is expected to maintain physical medium busy status (not generating PHY-CCA.indication(IDLE)) during the period required by that PHY to transfer a frame of the indicated LENGTH at the indicated DATARATE. This physical medium busy condition should be maintained even if a PHY-RXEND.indication(CarrierLost) or a PHYRXEND.indication(FormatViolation) is generated by the PHY prior to the end of this period."

Proposed Response Response Status O

FISCHER	R, MICHAEL A	Individual		

Comment Type TR Comment Status X

Sponsor ballot comment 256 was rejected because it attempted to introduce normative wording into the definition of an abstract interface. However, the (abstract) behavior that was the subject of the rejected comment is still relevant, and should be reflected in the text of this clause using non-normative wording.

#### SuggestedRemedy

Add a sentence immediately after the initial sentence of this clause that states: "In the case of an RXERROR value of "NoError," the MAC uses the PHY-RXEND.Indication as reference for channel access timing, as shown in Figure 166."

Proposed Response Response Status O

C/ 12	SC 12.3.5.12.3	P 488	L 29	# 25
FISCHER	R, MICHAEL A	Individual		

### Comment Type TR Comment Status X

Sponsor ballot comment 251 was rejected because it attempted to introduce normative wording into the definition of an abstract interface. However, the (abstract) behavior that was the subject of the rejected comment is still relevant, because proper operation of the MAC IS dependent on the PHY maintaining physical WM busy (CCA busy) for the duration indicated in a valid PLCP header. The solution is to describe the expected behavior without introducing normative wording.

### SuggestedRemedy

Add a statement at the end of the existing text that states: "After generating a PHYRXEND.indication with RXERROR value "UnsupportedRate," the PHY is expected to maintain physical medium busy status (not generating a PHY-CCA.indication(IDLE)) during the period required by that PHY to transfer a frame of the length and data rate encoded in the most recently received PLCP header. If the information in an otherwise-valid PLCP header is inadequate for the local PHY to determine the period required for transfer of the frame, the PHY is expected to report RXERROR of "FormatViolation."

Proposed Response Response Status **0** 

C/ 12	SC 12.3.5.4.4	P <b>480</b>	L 24	# 27
FISCHER	R, MICHAEL A	Individual		

Comment Type **GR** Comment Status **D** 

Sponsor ballot comment 252 was rejected because it attempted to introduce normative wording into the definition of an abstract interface. However, the (abstract) behavior that was the subject of the rejected comment is still relevant, and should be reflected in the text of this clause without the use of normative wording.

#### SuggestedRemedy

Add a sentence at the end of this clause that states: "The behavior expected by the MAC pursuant to issuance of PHY-TXSTART.Request is shown in Figure 166."

C/         12         SC 12.3.5.7.3         P 483         L 19         # 30           FISCHER, MICHAEL A         Individual         Individual	C/         17         SC         17.4.4         P         618         L         11         #         20           FISCHER, MICHAEL A         Individual         Indititititititititititititititititititit
Comment Type       TR       Comment Status       X         The existing statement was appropriate when written, but has been ambiguous since the introduction of PHYs with symbols that encode large numbers of bits. Sponsor ballot comment 254 was rejected, part of this rejection is acceptable to the commenter, but the is one aspect of that comment which remains important.         SuggestedRemedy       In the existing text, insert "symbol containing the" between "end of the" and "last bit"         Proposed Response       Response Status       O	specified and/or constrained in each of said PHY clauses. This does not appear to be the case for the OFDM PHYs defined in clause 17. The MAC is expecting aPHY-RX-START-Delay to be "The delay from the start of the preamble to the issuance of the RXSTART.indicate by the PHY." (this statement is quoted from Table 117, which is the only accurate statement of the definition of this parameter in the draft, an issue that is addressed in a separate recirculation ballot comment by this commenter) The OFDM PHY receive timing, shown in Figure 260, places (correctly) the occurrence of PHY-RX-
CI 17       SC 17.3.2.3       P       L       # 137         STEPHENS, ADRIAN P       Individual         Comment Type       T       Comment Status X         Table 139 rightmost column is wrongly labelled "10MHz"         SuggestedRemedy         Replace quoted text with "5 MHz".	START.indication at the end of the receipt of the Service field of the "Decoded+descrambled" PLCP header. Because (using numbers for 20MHz channel spacing, but the same issue pertains to each of the narrower channel spacings shown in Table 150) aPreambleLength is 16us, aPLCPHeaderLength is 4us, hence exactly 4us is available after preamble and PLCP header to complete the specified aPHY-RX-START- Delay of 24us. However, this 4us is consumed by reception of the first OFDM symbol of the "DATA" field (the symbol that contains the PLCP "SERVICE" field) which leaves no time for the "Viterbi Decoding Delay" shown in Figure 260, and required in OFDM PHY implementations.
Proposed Response Response Status O	SuggestedRemedy         Increase the duration of aPHY-RX-START-Delay in Table 150 to a set of value that are achievable by actual OFDM PHY implementations. If the increase exceeds 2us (for the 20MHz channel spacing column, or proportionally larger values for the other columns, it would be appropriate to include an informative note alerting implementers to the fact that this value is additive within the constraints under which "the requirements of aSIFSTime" and/or "aCCATime" listed elsewhere in Table 150 apply.         Proposed Response       Response Status       0

exist today other methods for accomplishing many of the mechanisms described in 802.11F that do not involve using the 802.11F protocol. However, the use of a specially addressed layer 2 frame (e.g. a null XID frame) by an AP to update the DS (e.g. and any infrastructure switches and routers) of the current association status of a mobile STA remains a valid and useful mechanism and method that is now lost.

### SuggestedRemedy

Add an informative note in clause N.2.2 (now O.2.2) that cites the use of a null L2 XID packet as one method of accomplishing a DS-STA-NOTIFY update sequence in a real network/ WLAN system. Also include a reference to 802.11F clauses 4.5.1, 4.9.3, 5.1.1, 5.5.1, 5.5.2, 5.8, and 6.3, and (subsequently) add an 802.11F reference to Annex E. Alternatively we could copy from 802.11F directly into 802.11ma (in the appropriate places) the lines of text that describe the XID frame. Then the 802.11F reference and reference citation would not be needed.

#### Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

Add the following sentence to the end of 0.2.2.1.4:

"There are many mechanisms to implement this mapping update for the cases of ADD and MOVE. One example mechanism, in the case where the DS is an 802 LAN, is to use an 802.2 XID null frame."

CI O SC 0.2.2	P1165	L 32	# 99
ENGWER, DARWIN A	Individual		

#### Comment Type TR Comment Status D

With the withdrawal of 802.11F there are now a few aspects of 802.11 that are not described, specified or defined anywhere. While that is in general very unfortunate, there exist today other methods for accomplishing many of the mechanisms described in 802.11F that do not involve using the 802.11F protocol. However, the use of a specially addressed layer 2 frame (e.g. a null XID frame) by an AP to update the DS (e.g. and any infrastructure switches and routers) of the current association status of a mobile STA remains a valid and useful mechanism and method that is now lost.

#### SugaestedRemedv

Add an informative note in clause N.2.2 (now O.2.2) that cites the use of a null L2 XID packet as one method of accomplishing a DS-STA-NOTIFY update sequence in a real network/ WLAN system. Also include a reference to 802.11F clauses 4.5.1, 4.9.3, 5.1.1. 5.5.1. 5.5.2. 5.8. and 6.3. and (subsequently) add an 802.11F reference to Annex E. Alternatively we could copy from 802.11F directly into 802.11ma (in the appropriate places) the lines of text that describe the XID frame. Then the 802.11F reference and reference citation would not be needed.
