6.8.5. CSK constellation Overview

CSK signal is generated by 3 color light sources in 7 color bands that are defined in 6.1.2 Operating frequency range and channel assignments. The 3 tops of CSK constellation triangle are decided by the center wave length of the 3 color bands on xy color coordinates. Table 29 shows the xy color coordinates values of those 7 color bands. Figure 39 shows the center of color bands on xy color coordinates.

6.8.5.1. CSK constellation rule

6.8.5.1.1 4 CSK

4 CSK symbol points are defined by the design rule in Figure 40. In Figure 40, Points I,J and K show the center of the 3 color bands on xy color coordinates. P0 to P3 are 4 symbol points of 4CSK. P0, P2 and P3 are 3 tops of the triangle IJK. P1 is a gravity center of the triangle IJK.

6.8.5.1.2 8 CSK

8 CSK symbol points are defined by the design rule in Figure 41. In Figure 41, Points I,J and K show the center of the 3 color bands on xy color coordinates. P0 to P7 are 8 symbol points of 8CSK. P0,P4 and P7 are 3 tops of the triangle IJK. P1 and P2 are points that divide side JK and side JI in the ratio 1:2. Point c and b are midpoints of the side JK and side JI. Line ba and line cd meet at right angles with line KI. P3 is a point that divides line ba in the ratio 1:2. P5 is a point that divides line cd in the ratio 1:2. P6 is a midpoint of the line KI.

6.8.5.1.3 16 CSK

16CSK symbol points are defined by the design rule in Figure 42. In Figure 42, Points I,J and K show the center of the 3 color bands on xy color coordinates. P0 to P15 are 16 symbol points of 16CSK. P0, P10 and P15 are 3 tops of the triangle IJK. P2 and P8 are points that divide side JK in one third. P3 and P12 are points that divide side JI in one third. P4 and P14 are points that divide side KI in one third. P5 is a gravity center of the triangle IJK. P1, P4, P6, P7, P9 and P13 are gravity centers of small triangles.

6.8.5.3.. Color band combinations

CSK constellation is decided by the combination of the 3 color bands. The system cannot select the combination which cannot make a triangle on the xy color coordinates, like as (110-101-100) or (100-011-010). Because, in those example combinations, the center points of 3 color bands are on a line in xy color coordinates in Figure 39. Table 30 shows color band combinations that can make triangles for CSK constellations.
