5.1 Approximate number of people expected to be actively involved in the development of this project: 30

5.2 Scope: This standard defines the physical layer (PHY) and medium access control (MAC) sublayer specifications for low-data-rate wireless connectivity with fixed, portable, and moving devices with no battery or very limited battery consumption requirements. In addition, the standard provides modes that allow for precision ranging. PHYs are defined for devices operating in a variety of geographic regions.

Changes in scope: This standard defines the physical layer (PHY) and medium access control (MAC) sublayer specifications for low-data-rate wireless connectivity with fixed, portable, and moving devices with no battery or very limited battery consumption requirements. In addition, the standard provides modes that allow for precision ranging. PHYs are defined for devices operating ~~various license-free bands~~ in a variety of geographic regions.

5.3 Is the completion of this standard dependent upon the completion of another standard: No

5.4 Purpose: The standard provides for ultra low complexity, ultra low cost, ultra low power consumption, and low data rate wireless connectivity among inexpensive devices, targeting the communications requirements of what is commonly referred to as the Internet of Things. In addition, some of the alternate PHYs provide precision ranging capability that is accurate to one meter. Multiple PHYs are defined to support a variety of frequency bands.

5.5 Need for the Project: There are a number errors, inconsistencies, and ambiguities in need of correction. Additionally there will be 6 completed amendments during the course of the revision that should be rolled up. These are IEEE Std 802.15.4n, IEEE Std 802.15.4q, IEEE Std 802.15.4s, IEEE Std 802.15.4t, IEEE Std 802.15.4u, and IEEE Std 802.15.4v.

5.6 Stakeholders for the Standard: The stakeholders include manufacturers and users of telecom, medical, environmental, energy, and consumer electronics equipment and manufacturers and users of equipment involving the use of wireless sensor and control networks.
