This document drafts a proposed response to the consultation issued by the Ministry of Industry and Information Technology (MIIT) of the People’s Republic of China for the proposed abolition of two normative documents re: 40-50 GHz band.

Notice: This document has been prepared to assist IEEE 802.18. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.

Re: Consultation on the proposed abolition of two normative documents re: 40-50 GHz band

Dear Telecommunications Bureau,

IEEE 802 LMSC is a leading consensus-based industry standards body, producing standards for wireless networking devices, including wireless local area networks (“WLANs”), wireless specialty networks (“WSNs”), wireless metropolitan area networks (“Wireless MANs”), and wireless regional area networks (“WRANs”). We also produce standards for wired Ethernet networks, and technologies produced by implementers of our standards are critical for all networked applications today.

IEEE 802 LMSC is a committee of the IEEE Standards Association and Technical Activities, two of the Major Organizational Units of the Institute of Electrical and Electronics Engineers (IEEE). IEEE has about 400,000 members in over 160 countries. IEEE’s core purpose is to foster technological innovation and excellence for the benefit of humanity. In submitting this document, IEEE 802 LMSC acknowledges and respects that other components of IEEE Organizational Units may have perspectives that differ from, or compete with, those of IEEE 802 LMSC. Therefore, this submission should not be construed as representing the views of IEEE as a whole.

Please find below the IEEE 802 LMSC’s specific comments on the proposed abolition of the following normative document, Circular No. 2013 No. 502 “Notice of the Ministry of Industry and Information Technology on Publishing Matters concerning Frequency Use of Broadband Wireless Access Systems in Mobile Services in the 40-50 Gigahertz (GHz) Band”.

IEEE 802.11 devices operating in the 40 GHz to 50 GHz band

The IEEE Std 802.11aj-2018 standard [1] support frequency operation in the 42.3 GHz to 47 GHz and 47.2 GHz to 48.4 GHz frequency bands. The channelization of IEEE 802.11aj includes 10 channels with a bandwidth of 540 MHz each and 5 channels with a bandwidth of 1080 MHz each. In China’s densely populated cities, and with the ubiquitous use of mobile devices, IEEE 802.11aj provides a robust solution to mitigate device interference, lowering instantaneous power requirements and increasing coverage, especially for small form-factor, battery-powered devices with small antennas. It also promotes the development of related technologies and applications that leverage spectrum uniquely available in China.

---

1 This document solely represents the views of IEEE 802 LMSC and does not necessarily represent a position of either the IEEE or the IEEE Standards Association.

Chenhe Ji (Huawei)
In November 2023, an IEEE 802.11 study group dedicated to the enhanced specification of millimeter Wave operation for WLAN connectivity will begin work, with the target of specifying frequency operation between 42.5 GHz and 71 GHz and defining integration with the multi-link operation framework specified by IEEE P802.11be [2]. The 40 GHz to 50 GHz bands will therefore be of continued relevance for the WLAN ecosystem.

The normative document should be retained

IEEE 802 LMSC believes that the MIIT should retain the normative document to support the use of broadband wireless access systems in mobile services, including radio local area network (RLAN), in the 40 GHz and 50 GHz band. Retaining the document strengthen the MIIT’s goals to improve spectrum utilization and further the development of telecommunications industry ecosystem.

Conclusion

IEEE 802 LMSC thanks the MIIT for the opportunity to provide this submission and kindly requests MIIT to consider our responses in its future decisions regarding the use of broadband wireless access systems in mobile services in the 40 GHz and 50 GHz band.

Respectfully submitted,

By: /ss/.

Paul Nikolich
IEEE 802 LAN/MAN Standards Committee Chairman
