
Changes in scope: This standard specifies the air interface, including the cognitive radio medium access control layer (MAC) and physical layer (PHY), of point-to-multipoint and point-to-point wireless regional area networks comprised of a professional fixed base station with fixed and portable user terminals operating in the bands that allow spectrum sharing such as VHF/UHF TV broadcast bands between 54 MHz to 862 MHz.

Changes in purpose: This standard is intended to enable deployment of interoperable IEEE 802(R) multivendor wireless regional area network products, to facilitate competition in broadband access by providing alternatives to wireline broadband access and extending the deployability of such systems into diverse geographic areas, including sparsely populated rural areas, while preventing harmful interference to incumbent licensed services in the bands that allow spectrum sharing such as the TV broadcast bands. This Revision project merges the P802.22a Amendment on MIBs and Management Plane Procedures. It also merges the P802.22b amendment on Enhancements for Broadband Services and Monitoring Applications. The revision project makes technical corrections to various Clauses. The revision project introduces a new clause that provides ways in which the IEEE 802.22 Standard may be used in other frequency bands that allow spectrum sharing.

The revision project makes technical corrections to various Clauses. The revision project introduces a new clause that provides ways in which the IEEE 802.22 Standard may be used in other frequency bands that allow spectrum sharing.
5.5 Need for the Project: There is a large, untapped market for broadband wireless access in rural and unserved/underserved areas where wired infrastructure cannot be economically deployed. There are frequency bands that allow cognitive radio based systems to share the spectrum with the primary users of the spectrum. Products based on this standard will be able to serve those markets and increase the efficiency of spectrum utilization in various bands where spectrum sharing is allowed. Also, it is a requirement of the Standards Association that the Sponsor shall initiate a revision of a standard whenever any of the material in the standard (including all amendments, corrigenda, etc.) become obsolete or incorrect, or if multiple amendments to a base standard are being worked on or near completion three years after its approval or most recent reaffirmation. Such is the case here where there are two amendments (viz. P802.22a on MIBS and Management Plane Procedures and P802.22b on Enhancements for Broadband Services and Monitoring Applications) that are likely to complete in the near future. Furthermore, the IEEE 802.22 Working Group has identified some clauses that require correction and maintenance. The intention is to incorporate the amendments P802.22a, P802.22b, make corrections to the IEEE Std. 802.22-2011 as well as to add a new clause that provides ways in which the IEEE 802.22 Standard may be used in other frequency bands that allow spectrum sharing.

5.6 Stakeholders for the Standard: Manufacturers and users of semiconductor, personal computer, enterprise networking devices, consumer electronic devices, home networking equipment, mobile devices, wireless internet service providers etc.

---

Intellectual Property

6.1.a Is the Sponsor aware of any copyright permissions needed for this project?: No

6.1.b Is the Sponsor aware of possible registration activity related to this project?: No

7.1 Are there other standards or projects with a similar scope?: Yes

If Yes please explain: IEEE P802.11AF, P802.15.4m, IEEE P1900.7

and answer the following:

Sponsor Organization: IEEE 802 and DySPAN-SC

Project/Standard Number: IEEE P802.11AF, P802.15.4m, IEEE P1900.7

P802.15.4m: IEEE Standard for Local and Metropolitan Area Networks Part 15.4: Low Rate Wireless Personal Area Networks (LR-WPANs) Amendment: TV White Space Between 54 MHz and 862 MHz Physical Layer

IEEE P1900.7: Radio Interface for White Space Dynamic Spectrum Access Radio Systems Supporting Fixed and Mobile Operation

7.2 Joint Development

Is it the intent to develop this document jointly with another organization?: No

8.1 Additional Explanatory Notes (Item Number and Explanation): There is a large, untapped market for broadband wireless access in rural and unserved/underserved areas where wired infrastructure cannot be economically deployed. There are frequency bands that allow cognitive radio based systems to share the spectrum with the primary users of the spectrum. Products based on this standard will be able to serve those markets and increase the efficiency of spectrum utilization in various bands where spectrum sharing is allowed. Also, it is a requirement of the Standards Association that the Sponsor shall initiate a revision of a standard whenever any of the material in the standard (including all amendments, corrigenda, etc.) become obsolete or incorrect, or if multiple amendments to a base standard are being worked on or near completion three years after its approval or most recent reaffirmation. Such is the case here where there are two amendments (viz. P802.22a on MIBS and Management Plane Procedures and P802.22b on Enhancements for Broadband Services and Monitoring Applications) that are likely to complete in the near future. Furthermore, the IEEE 802.22 Working Group has identified some clauses that require correction and maintenance. The intention is to incorporate the amendments P802.22a, P802.22b, make corrections to the IEEE Std. 802.22-2011 as well as to add a new clause that provides ways in which the IEEE 802.22 Standard may be used in other frequency bands that allow spectrum sharing.
